## FOR IMMEDIATE RELEASE

### **PCProfile Offers USB Data Loss Protection through CenterTools DriveLock™**

Adelaide, South Australia, June 12<sup>th</sup> 2009 - PCProfile of Adelaide, South Australia with almost 20 years of experience in audit and anti-piracy security products for desktop based computer systems, announced today that it has signed an agreement with CenterTools to distribute DriveLock™ in Australia and New Zealand. CenterTools, a leader in device control provides effective management auditing, protection and centralised reporting from mobile device threats.

*"With security breaches from USB devices continuously on the rise, DriveLock is a natural extension and complimentary to the PCProfile security management line. This is a great solution for anyone looking to keep their information secure, their customer information secure and their intellectual property protected"* said Rob Harmer, General Manager for PCProfile.

*"A recent study from Ponemon Institute highlighted that almost 60 percent of employees stole company data when they left their job last year, resulting in significant economic losses and exposing the company to regulatory infringements. Many indicated that they used this information in their next job, which is unacceptable fraudulent behaviour",* Harmer added. USB sticks, PDAs and flash drives pose a significant risk to your organization if not properly secured, audited and managed.

DriveLock™ fits easily into your management and IT infrastructure to help you protect your network systems, your data and your customer data. The DriveLock™ modular software suite allows for auditing and central reporting, full control of mobile devices, and Full Drive Encryption, protecting all forms of confidential data and intellectual property giving you the control and information you need to enforce policy compliance and meet regulatory requirements.

*"CenterTools is excited to strengthen its role in Australia and New Zealand through this partnership with an industry partner that has a strong track record of bringing management solutions to a marketplace facing increasing challenges and threats through data loss"* added Joern Wettern, Vice President for Technology, CenterTools.

CenterTools product DriveLock eliminates a majority of the dangers associated with abusing removable storage devices, like USB-sticks, external drives, PDAs, Bluetooth devices and many more.

A free Drive Scanner is available to detect how many USB and other devices have been in use on your systems at [www.pcprofile.com/USBScanner.htm](http://www.pcprofile.com/USBScanner.htm)

**PCProfile** has been in business since 1991 offering practical management advice and solutions to organizations across the world to help them to both understand and manage the rapidly changing technology scene within business. In business since 1991, PCProfile has played a very active role in Anti-Piracy advice, audit and solutions continuously for 18 years and is the auditing tool of choice for independent audit consultants and auditors wishing to conduct a software inventory to demonstrate software compliance.
