

PRESS RELEASE

Monitor Unauthorized USB Memory Stick Activity and Prevent Data Theft

Overview

USB CopyNotify! network security software raises an immediate alert when a portable USB storage device such as a USB memory stick/thumb drive/pen drive/Flash Drive are inserted and have files copied to or from any computer on the network to a USB drive. The real time alert from USBCopyNotify! helps prevent the unauthorized copying of confidential data on the USB drive and reduce the possibility of data theft.

Details

PCProfile now offers USB CopyNotify!, a specialized windows network security software developed by CygNET Systems Pvt. Ltd. that raises a notification as soon as a USB storage drive is used on any computer on the network. By receiving immediate notifications when a USB drive is being plugged into any computer, prevention of unauthorized copying of confidential information is possible. The software also monitors data copy operations on USB drives, and creates a

notification and a log entry containing the name of each file that is being copied. Notifications of the shut down or uninstall of the USB CopyNotify! program itself are also generated, which helps identify time and date of use of the USB device.

USB CopyNotify!, comes with a simple installation procedure, where the Server component of the program is loaded on the computer that will be used to receive all alerts of USB drive activity on the network, while the Client component of the program is loaded on each computer that needs be monitored for USB drive activity. Each time a USB drive is inserted or removed from any monitored computer, the server component receives real time notifications of the event. The activity log can be printed or used for detailed reporting and investigation at a later stage if required.

By providing real time notifications of portable USB drive activity on the network, USB CopyNotify! is best suited to business owners who want to make sure that unauthorized individuals cannot copy private information from their computer network or for administrators who want to audit and monitor the USB ports on all of the computers on the LAN. USBCopyNotify! provides for flexible, sensible use policies of USB drives, with management monitoring capability, to enable practical and sensible management of the use of USB storage devices.

USB CopyNotify! v. 1.3 runs on Windows 2000/XP/2003/Vista. The free trial version will monitor up to three computers on the network. License packs are also available for 10, 25, 50, 100, and 200 computers, as well as license packages for larger networks.
